LAB REPORT
EMT 2390L – OL76

(OPERATING SYSTEM LAB LABORATORY)

LAB #1

Name: Puja Roy
Date: 2/6/21

I installed VirtualBox by going to www.virtualbox.org. Then, I clicked on downloads and downloaded the Windows Host platform package. From there on, I had the VirtualBox 20.04 LTS ISO fire file since it is the latest version of VirtualBox, and it has a long-term support to 2025. Then, I went to www.ubuntu.com to download the desktop version of Ubuntu 20.04 LTS. After that, I created a virtual machine in VirtualBox by naming it Ubuntu 20.04 LTS. Next, I clicked on Ubuntu to configure the settings options. Then, I clicked on the storage to choose a disk file for the virtual machine and selected the Ubuntu 20.04 LTS iso fire file. Then, I clicked on the start button for Ubuntu to run properly in the machine. I also have the latest version of Ubuntu installed in my desktop.
